

## Gryphon Zephyr Ring Saw

Like so many other glass artists, we've been eagerly awaiting the arrival of the NEW Gryphon Zephyr Ring Saw and we're VERY impressed with its performance!!

The NEW Gryphon Zephyr Ring Saw offers a number of advantages not found in other glass saws. The diamond-coated stainless-steel ring blade will cut glass in ANY direction, forward, backward, or sideways, and operation is very smooth and very quiet (much, much quieter than its competition)! The Zephyr saw has a large work surface (17.5" x 17.5" - again, substantially larger than the competition), that is free of obstructions. Completely safe to operate, the diamond ring blade will NOT cut your fingers, but slices through any hard materials including glass, tile, rock (and other similar materials) "like budda" thanks to its 1/3HP DC motor.

The overhead blade support is slender, not bulky, allowing the artist to have a clear view of the material that is being cut. In addition, the Zephyr has a deeper throat (20% deeper at 6 5/8" vs. 5 1/2") and therefore offers more clearance for the glass than other ring saws.

Special attention has been given to designing this ring saw for both quiet operation and low maintenance. Unlike the competition, the Zephyr's critical moving parts are shielded to minimize wear and tear from the glass dust that is generated when cutting and the highest quality bearings and wheels are used to extend the life of these critical parts.

The motor/blade assembly is a separate unit that can be removed from the base and used as a hand-held saw which is useful for cutting larger items that cannot easily be brought to the table. A small water reservoir is built into the blade assembly housing and will hold enough water for a few minutes of hand-held cutting and, unlike the competition, it is NOT necessary to attach a separate housing cover when using the motor/blade assembly separately from the table base. A very convenient and well designed hand grip makes hand-held operation comfortable and secure.

When the saw is used in the normal configuration (installed in the table base), the base will hold enough water for several hours of cutting. The Zephyr comes with a 3 year warranty on all mechanical and electrical parts (wear parts such as the blade, drive belt, drive wheels and bearings are not covered under the warranty).

Please note that the Gryphon Zephyr Ring Saw will ship via USPS Parcel Post. If you wish to have expedited delivery, please contact the Lasses at: [twolassesglass@yahoo.com](mailto:twolassesglass@yahoo.com). Expedited delivery fees will be the responsibility of the customer.
